Although most of the themes have a sidebar with the sections of the presentation, it is still for some people very useful to highlight the upcoming section and its contents. This can be achieved using the command tableofcontents[currentsection] just after the section definition.

Columns

Wildbienen

Manfred

Columns can be used in order to separate content.

Some text in the first column. It is important to see here that the content in the columns are aligned to the top. You can choose t,c or b.

Some text the second column.

Of course you are able to create also equations

$$m\ddot{x} = \sum_{i=1}^{n} F_i \quad , \quad \delta H = 0 \quad , \quad x(t) = \int_{0}^{t} v(s)ds \tag{3}$$

separately or in the text $f(x) = x^2$ using the common commands.

Handout

Handout option

As you could see using the command pause a lot of PDF pages are created. May be you will want to give an handout of your presentation without the pauses. This can be done with the document class option handout. This will then ignore all pauses and a "reduced" PDF will be created.
